Sand Washer ST

Sand Washer ST separates, washes & dewateres sand from water.
Street sand, filter sand and similar materials can be handled.

The sand/water mix is pumped or fed into the separation tank where sand settles to the washing zone and is mechanically agitated and flushed.
After washing the screw conveyor dewateres & conveys the sand.
Excess water during pumping flows out over a weir and is led out.
The organic material is led out through the same outlet.

Capacity 5-50l/s
Ignition loss 1-5%

MN has hundreds of international references and has worked with machinery within water treatment for 30 years.
We offer the most innovative solutions and the most extensive knowledge on screening equipment.
We make all our products ourselves acc to ISO & CE standards,
We only use certified materials and welders.
